

ABSTRACT OF THE DISCLOSURE

A method and a device for producing envelopes that are imprinted on the inside and/or on the outside, at least in part, and other similar items, including shipping bags of all types. According to the method, an envelope or other item that is imprinted on the inside and/or on the outside, at least in part, is produced by using at least one print unit to imprint a material web and then passing the imprinted web to other stations of an envelope machine, up to the complete production of the envelope.
